

## AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A Device device for transforming the main supply voltage into a lower voltage, comprising a first male connector that can be selectively plugged into a main supply socket, a second male connector that can be selectively plugged into a consumer, and an electronic circuit for transforming the voltage which is located between the two connectors, and wherein the electronic circuit forms with the second connector (2) one rigid physical unit whereby the second connector (2) is supported by the housing.

E1  
2. (Currently Amended) A Device device according to claim 1, and further comprising an ON/OFF switch (5) including one of an ON and an OFF state for supplying the line voltage to the consumer.

3. (Currently Amended) A Device device according to claim 1, wherein the second connector (2) has at least three poles.

4. (Currently Amended) A Device device according to claim 1, and further comprising an indicator (4) for indicating the operational state of the device.

5. (Currently Amended) A Device device according to claim 1, wherein the second connector (2) ~~can be removed~~ is removable from ~~the rest of~~ the unit and can be changed by another connector if necessary.

6. (Currently Amended) A Device device according to claim 1, wherein the first connector (1) is connected with the ~~rest of the~~ unit via an electric line.

7. (Currently Amended) A Device device according to claim 6, wherein the electric line ~~has~~ includes a third connector, that ~~can be removed~~ is removable from the unit.

8. (Currently Amended) A Device device according to claim 1, wherein the unit is built into a case (3).

9. (Currently Amended) A Device device according to claim 1, wherein one of the unit and the consumer are provided with elements that ensure a secure fastening of the unit at the consumer.

10. (Currently Amended) A Device device according to claim 9, wherein the connector elements of the second connector and the respective elements in the consumer are constructed for correctly fastening the unit.

11. (Currently Amended) A device for converting a main supply voltage to a lower voltage, the device comprising:

a housing;

a first male connector coupled to the housing, the first male connector operable to connect to a main supply voltage; and

a second male connector supported by the housing, and being operable to ~~connect to~~ plug into an electronic device.

12. (Previously Added) A device as claimed in claim 11, wherein the housing includes an electronic circuit for transforming the main supply voltage to a lower voltage, and wherein the first and second connectors are electrically coupled to the electronic circuit.

13. (Currently Amended) A device as claimed in claim 11, further comprising ~~a switch~~ an ON/OFF switch coupled to the housing and operable to control the main supply voltage to the electronic circuit.

14. (Previously Amended) A device as claimed in claim 11, wherein the second connector is releasably interchangeable with connectors having different connector layouts.

15. (Currently Amended) A device for transforming a main supply voltage, the device comprising:

a housing including an electronic circuit for transforming the main supply voltage;

El  
(cont)  
a first electrical male plug coupled to the housing for connection with an electrical outlet supplying the main voltage;

a second electrical male plug supported by the housing ~~for connection to~~ and adapted to plug into an electronic device; and

a an ON/OFF switch coupled to the housing to control the supply of voltage to the electronic circuit.

16. (Previously Added) A device as claimed in claim 15, wherein the second electrical plug is releasably interchangeable with electrical plugs having different electrical plug layouts.

17. (Currently Amended) ~~A Device~~ device for transforming the main supply voltage into a lower voltage, the device comprising a first connector that can be plugged into a main supply socket, a second connector that can be plugged into a consumer and an electronic circuit for transforming the voltage which is located within a housing between the two connectors, and wherein the second connector (2) is supported by the housing.
